

PowerNode™

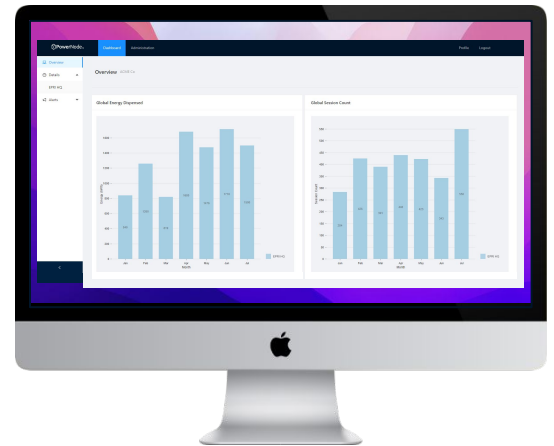

## PowerNode Command Console

Command Console is the single stop dashboard for your convenience store's EV fast charging station. It allows you to monitor performance, revenues, uptime, session data, and costs all in one simple-to-use interface.

Rest assured that Command Console integrates with industry leading point of sale systems allowing you to seamlessly track charging revenue. Command Console helps you unlock additional revenue by displaying in-store deals on the charger HMI as people charge up, and it increases your store's repeat customers by synchronizing your loyalty reward programs with your charging station.

Command Console also helps you make more money by supercharging your station's performance with its proprietary car forecasting algorithms that minimize your energy costs to increase your daily profits.

### PowerNode Command Console

#### REVENUE & COST TRACKING

Monitor revenue from charging fees

#### SESSION TRACKING

Monitor session time of day and electricity cost data including tariff optimization performance

#### USER DATA

Gain insights about customer time onsite at your stores

#### POINT OF SALE INTEGRATION

Directly connect with your point of sale system, promote in-store deals, and integrate with loyalty programs
